(57) ABSTRACT

A television viewer uses a PIP format for display of program
related information such as television program listings from
a program schedule data base in the background and
moving, real time or stored video clip images of a program
selected from the displayed listings in the PIP window. All
the text of the background information lies outside the PIP
window. In one embodiment, as the viewer selects a par-
ticular program from the display of current television pro-
gram listings by means of a cursor or a code number, the
corresponding program automatically appears in the PIP
window.
